Project Ardrossan Harbour Port Expansion Feasibility

Client Peel Ports Group

Project Ardrossan Harbour was proposed to be developed to accommodate larger Roll-on-roll-off ferries. To facilitate this one of the requirements is that a larger turning area is required to be instated to the north-west of the main harbour pier. Peel Ports engaged The Bates Partnership to undertake a high-level study on:

- The type and scale of geotechnical investigation required and the applicable cost;
- The design of the dredging and volumes of material to be dredged;
- Key cost factors and their applicability;
- The likely dredging methods and their costs;
- Dredging productivity;
- The environmental assessment and permits/licensing required and the cost; and
- timeframe of completion.

The results of this study contributed to the determination of the viability of the proposed development.
